Claims 24-26, 28-37, 79, 82, 85-94, 110, 112-117, 122, 124, 127-129, & 142-143 are considered allowable since no prior art reference or combination of prior art references disclose or suggest the combination of limitations specified in the independent claims including :

“wherein said first signaling message is a single signaling message, wherein said single signaling message comprises a plurality of information elements, wherein a first information element is designed to request set up of a single virtual circuit comprised in said first plurality of virtual circuits and a second information element in the form of a non-mandatory information elements according to a signaling specification used in said ATM network designed to request set up of a second virtual circuit comprised in said first plurality of virtual circuits;

an inbound interface designed for receiving on said ATM network a first acceptance message indicating that only said single virtual circuit is set up if any of the plurality of switches in connection path between said first end system and said second end system is designed not to support processing of said non-mandatory information elements wherein said first acceptance message is received in response to sending said first information element contained in said signaling message to said second end system” as in combination with other claim limitations as specified in claim 24

“wherein said second information element comprises a non-mandatory information element and said first information element comprises a mandatory information element according to a signaling specification used for signaling in said ATM network, wherein non-mandatory information elements can be ignored by said plurality of switches according to said signaling specification” in combination with other claim limitations as specified in claim 79

“means for sending on said ATM network to said second ATM switch a single signaling message requesting a plurality of virtual circuits to be set up, wherein said single signaling message comprises a plurality of information elements wherein a first information element is designed to request a set up of a single virtual circuit comprised in said plurality of virtual circuits, and a second information element in the form of a non-mandatory information element according to a signaling specification used in said ATM network is designed to request set of a second plurality of virtual circuits comprised in said plurality of virtual circuits and

means for receiving an acceptance message in response to sending said single signaling message; said acceptance message indicating that only said single virtual circuit is provisioned if any of a plurality of switches in a connection path between said device and said second ATM switch is designed not to support processing of said non-mandatory information element” as in combination with other claim limitations as specified in claim 110

“receiving another acceptance message indicating that only said single virtual circuit is provisioned if any of said plurality of switches in said connection path is designed not to support processing of said second information element in the form of said non-mandatory information element in said single signaling message” in combination with other claim limitations as specified in claim 122.

“said single signaling message includes a first information element and a non-mandatory information element according to a signaling protocol, wherein said first information element requests setting up a virtual circuit and said non-mandatory element requests setting up a second virtual circuit wherein said first virtual circuit and said second virtual circuit are contained in said plurality of virtual circuits wherein said non-mandatory information element can be ignored by said first ATM switch and said second ATM switch according to said signaling protocol.

“if said second ATM switches does not support processing of said non-mandatory information element said second ATM switch ignoring said non-mandatory information element and processing said first information element to provision said first virtual circuit, said second ATM switch sending a second acceptance message as a response to said single signaling message indicating that only said first virtual circuit has been provisioned in response to said single signaling message” as in combination with other claim limitations as specified in claim 142

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
